SYSTEM DESIGN · FINAL RELEASE

Asset Intelligence Copilot

A source-grounded assistant for 600 wells across seven areas · calculation date: 15 January 2027

Runtime uses one copilot with five bounded tools; the Sol/Luna labels describe build-time roles, not runtime agents.

Data path
Loader places the released dataset in a shared SQLite database. Private chats live separately in a second SQLite database.

Answer path
SQL queries, evidence lookup, FTS5 manual/SOP search, recall and remember support answers. Saved query rows feed validated OpenUI components.

Safeguards
Original records remain intact; accepted scoped corrections inform later calculations. Private memory access is owner-checked. Demo user selection is not production authentication.

Evaluation results and limits

Updated pipeline run in progress: 16/21 turns attempted as of 17 Oct 2026: 11 HTTP 200 partials, 4 HTTP 502 errors, 1 request pending. Partial HTTP success does not establish correctness; these new answers have not yet completed evidence review. The table below reports the separate, completed E4 run.

Question	Earlier full run (E4)	Evidence review
Q1 · Pressure	Supported refusal: pressure is unmeasured; no map.	Scanned 125,198 inspections; zero pressure matches; cited equipment inventory.
Q2 · Producer	HTTP 502 upstream error; no answer.	Source has no per-well oil-volume measure; refusal to rank barrels is warranted.
Q3 · Gas reports	HTTP 502; no table.	No answer to assess. Reference oracle only: 26 reports; 17 met deadline, 9 missed.
Q4 · Bypasses	Context-limit partial; no table, citations or results.	No answer to assess. Reference oracle only: 12 intervals, 3 current, 5 violations.
Q5 · Regulator	Context-limit partial; no table or evidence.	Not verifiable.
Q6 · Disagreement	Context-limit partial; no table or evidence.	Not verifiable.
Q7 · Repair risk	Both turns context-limit partial; no ranking.	No crew recommendation or table; no unique oracle ranking.
Q8 · Recall	Turns 1–2: HTTP 502; turns 3–5: context-limit partial.	No recall tables or sourced facts; no shared change saved, persistence not demonstrated.
Q9 · Multi-topic	Turn 2: Nathan Pierce, 150 TEAM-NW wells. T1/T5 partial; T3/T4/T6 HTTP 502.	Turn 2 supported by four saved-query citations. T4 got no answer; no Dec 3 H2S reading, latest documented earlier value 0 ppm on Nov 20.
Q10 · Workload	HTTP 502; no table or stacked bar.	Not verifiable.
Q11 · Region	HTTP 502; no evidence or comparison.	Not verifiable.

E4 result: Q1 refusal and Q9-2 (Nathan Pierce, 150 wells) were the only supported answers: 2/21 verified answer coverage, not an accuracy rate. Q9-2 had four saved-query citations. Q9-4 had no answer; source records contain no Dec 3 H2S reading. Oracle counts above are reference checks, not model outputs.

Limits: E4's other 19 turns were unverifiable. It recorded at least 1,740,380 tokens; no cost total is stated. Full runtime conversations remain private. E4 report · source checks. Dataset: 125,198 inspections and 17,415 maintenance records.
